

Crack-Vac™

Dust Containment System

Cleans while containing dust and debris from the crack cleaning operation

The Crafcro Crack-Vac is the environmentally effective way to remove dirt and debris from cracks dust free.

Features:

- Truck or trailer mount
- 150 gallon holding tank
- 10 micron filtration system
- Diesel engine
- 473 c.f.m. vacuum
- "Cab over" boom
- 2.5" diameter suction wand with quick disconnects
- Replaceable suction wand wear shoes
- Blower discharge silencer

Crack-Vac Dust Containment System

Air quality is our most important concern. The Crafcro Crack-Vac cleans pavement cracks and maintains a clean environment while preserving work and public safety. The Crack-Vac boom extends in front of the truck cab keeping the worker out of traffic areas. With a filter system that contains particle matter down to ten microns (PM 10), the Crack-Vac complies with the strict air quality standards in effect today.

This new concept in crack sealing preparation limits workers exposure to dust and improves visibility problems that dust can cause the motoring traffic. If airport F.O.D. (foreign object debris) is a concern, the Crack-Vac is ideal for F.O.D. pick-up and disposal. The Crack-Vac is environmentally friendly, safe, and highly efficient.
